

LUMEN

Intelligent School Management Platform

Product Overview & Commercial Proposal

Prepared for: Prospective Partners & Clients

2025 Edition

1. Executive Summary

Lumen is a comprehensive, AI-powered school management platform purpose-built for private educational institutions. The platform digitises and streamlines every critical workflow across four key stakeholders — students, teachers, parents, and school administration — delivering a unified and intelligent experience on a single, cloud-hosted solution.

Lumen addresses a significant and largely underserved market gap in Pakistan's private education sector, where the majority of institutions continue to rely on manual record-keeping, fragmented communication channels, and reactive rather than data-driven decision-making.

This document provides a complete overview of Lumen's platform capabilities, technical architecture, artificial intelligence features, and commercial model, intended for the review of prospective institutional clients, investors, and distribution partners.

2. The Problem We Solve

Private schools across Pakistan face consistent operational challenges that impede academic outcomes and administrative efficiency:

- Attendance records are maintained manually, resulting in data errors and delayed parental notifications.
- Academic performance data is siloed across teachers, making it difficult to identify at-risk students in time.
- Parents receive limited, infrequent updates on their child's academic progress and conduct.
- Teachers spend a disproportionate amount of time on administrative tasks rather than instruction.
- School leadership lacks real-time, consolidated analytics to make informed curriculum or resource decisions.

Lumen resolves each of these challenges through an integrated, role-based digital platform enhanced with artificial intelligence.

3. Platform Overview

Lumen serves four distinct user groups, each with a tailored panel designed around their specific responsibilities and information needs.

3.1 Student Panel

The Student Panel provides learners with centralised access to all academic information and an AI-powered learning assistant.

Dashboard

- Daily class schedule and upcoming lessons
- Pending homework and submission deadlines
- School announcements and notices

Attendance

- Personal attendance percentage and monthly breakdown
- Automated absence alerts

Assignments

- View and download assigned homework
- Upload completed submissions digitally
- Deadline reminders and submission status tracking

Grades & Academic Records

- Itemised marks for quizzes, tests, and assignments
- Subject-wise performance history

AI Learning Assistant

An AI-powered study assistant is integrated directly within the student panel, designed to support learning rather than replace it. The assistant:

- Explains concepts in clear, step-by-step language
- Provides guided hints and scaffolding for homework problems
- Generates customised practice questions by topic and difficulty
- Deliberately withholds full answers to encourage independent problem-solving

Example interaction:

Student: *Can you solve this algebra problem for me?*

Lumen AI: *Let me walk you through the concept first, then give you a hint so you can arrive at the solution yourself.*

3.2 Teacher Panel

The Teacher Panel equips educators with tools to manage attendance, assignments, grading, and student performance analysis — all within a single interface.

Dashboard

- Today's teaching schedule
- Pending grading queue
- Class-wide attendance alerts

Attendance Management

- Mark individual or bulk attendance per class session
- Edit and amend historical attendance records

- Real-time attendance reporting per student

Assignment & Quiz Management

- Create and distribute homework assignments with deadlines
- Upload supporting files and reference materials
- Design and administer quizzes
- Enter and update marks; export grade sheets

Student Performance Analytics

- View individual student academic trajectories
- Compare individual performance against class averages
- Filter by subject, period, or assessment type

AI-Generated Student Reports

With a single click, teachers can generate a comprehensive, narrative-style performance summary for any student. The AI synthesises attendance data, quiz scores, assignment results, and grade trends to produce a professional written report.

Sample AI-generated report excerpt:

Ali demonstrates strong academic performance in Mathematics but encounters consistent difficulty with English grammar. His attendance rate has declined to 72% this month, which may be adversely impacting his written work. It is recommended that Ali undertake targeted grammar practice exercises and be enrolled in available remedial support sessions.

3.3 Parent Panel

Parental engagement is a cornerstone of the Lumen value proposition. The Parent Panel provides guardians with transparent, real-time visibility into their child's academic life — a key driver of institutional trust and client retention.

Dashboard

- Live attendance status and monthly summary
- Upcoming homework deadlines and test dates
- Latest academic results

AI Progress Reports

- Plain-language AI performance summaries
- Identification of weak subjects with suggested improvement actions

Notifications

- Instant absence alerts
- Homework and test reminders
- Grade publication notifications

Teacher Communication

- Direct in-platform messaging with subject teachers
- Message history and response tracking

3.4 School Administration Panel

The Administration Panel provides school leadership and management staff with complete oversight of the institution's academic operations.

School Configuration

- Create and manage classes, sections, and academic years
- Define subjects and assign to classes

User Management

- Onboard and manage student, teacher, and parent accounts
- Role-based access control and permission management

Timetable Management

- Build and publish class schedules
- Assign teachers to subjects and sessions

Reporting & Analytics

- Institution-wide attendance reports
- Academic performance summaries by class, subject, or period
- Class-level statistical analysis

Fee Management (Available in Phase 2)

- Digital fee records and payment status tracking
- Fee reminders and overdue notifications

4. Artificial Intelligence Capabilities

Lumen's AI layer is purpose-designed for educational contexts. Rather than generic AI integrations, Lumen employs AI to deliver specific, measurable outcomes for students, teachers, and administrators.

4.1 AI Student Performance Analysis

The system automatically analyses a student's complete academic profile — including attendance, quiz scores, assignment results, and grade history — and generates structured, human-readable insight reports.

Component	Description
Input Data	Attendance records, quiz scores, assignment marks, subject grades
AI Output	Narrative performance summary, identification of weak subjects, attendance impact analysis, personalised recommendations
Trigger	Teacher-initiated ("Generate Report" button) or scheduled automated generation
Recipient	Teacher dashboard, parent portal, school administration reports

Sample AI output:

Sara demonstrates exceptional aptitude in Science and Mathematics, consistently achieving above-average scores. Her performance in Urdu requires targeted attention, particularly in written expression. Attendance has remained exemplary at 90% this term. It is recommended that Sara undertake structured Urdu writing practice and regular grammar review to bring her performance to an equivalent level across all subjects.

4.2 AI Homework Tutor (Student-Facing Chatbot)

The AI Homework Tutor operates as a guided learning companion — not an answer engine. It is architecturally designed to support academic integrity while providing meaningful learning support.

- Delivers step-by-step concept explanations tailored to curriculum level
- Provides structured hints to guide independent problem-solving
- Generates practice questions on demand by topic and difficulty
- Blocks requests for complete assignment solutions to uphold academic integrity
- Response length and scope are intelligently limited to prevent misuse

5. Product Roadmap

Lumen is designed for continuous evolution. The Phase 1 release delivers a robust, fully-featured core platform. Phase 2 introduces advanced AI capabilities that further differentiate Lumen in the market.

Phase 1 — Core Platform (Current Release)

- Student, Teacher, Parent, and Administration panels
- Attendance management and automated notifications
- Assignment and grade management
- AI Student Report Generator
- AI Homework Tutor (Chatbot)
- Cloud-hosted, multi-tenant architecture

Phase 2 — Advanced AI Expansion (Planned)

Feature	Description
AI Report Cards	Automated term-end academic report card generation with personalised narrative summaries
AI Timetable Generator	Intelligent scheduling engine that optimises teacher allocation and class load
AI Exam Paper Generator	Automated question paper creation aligned to syllabus and difficulty parameters
Biometric Attendance	Face recognition-based automated attendance marking
WhatsApp Notifications	Direct parent notifications via WhatsApp for maximum reach and engagement
Voice AI Tutor	Conversational voice-based learning assistant for students
AI Integrity Monitor	Intelligent detection of academic dishonesty patterns in submissions

6. Next Steps

We welcome the opportunity to present Lumen in further detail and discuss how the platform can be tailored to the specific requirements of your institution or portfolio. The following engagement pathways are available:

1. Schedule a live platform demonstration at your convenience.
2. Initiate a structured pilot programme at a single institution.
3. Review a tailored commercial proposal based on your enrolment figures.
4. Discuss distribution or partnership arrangements for school networks.

We look forward to partnering with your institution to deliver a measurably better educational experience.
